Triple Aim
Federal
• Improved Population Health
• Improved Patient Experience
• Lower Cost

DIG Health Center
• 4,500 patients served
• Improved Quality
• Financial break even
**Situation:** Your dental center is running along just fine – oh, maybe a small annual loss. The mission and aims of your health center tell you that you should do more – serve more underserved patients, improve the quality of their care and do it within a budget. You have determined that 7,500 people in your community need the dental care that your health center can provide. You estimate that at least 60% of them (4,500) would be interested in getting their care at your health center.

Above are 5 options you can pursue, if only you can convince your CEO and your Board of Directors to move ahead on them. Each of these options comes with costs and with additional income or other benefits. In your group, pick all of the options that will help you to accomplish all three aims. You may pick as many or as few options as you wish (if you pick the foundation/federal funding award option, though, you must also pick “add one dentist” and “track quality improvements”). Don’t spend much time figuring out what might work and what might not, because when you have decided on your options, we will plug those choices into our business model, determine whether our options met the aims, and ask why or why not.
